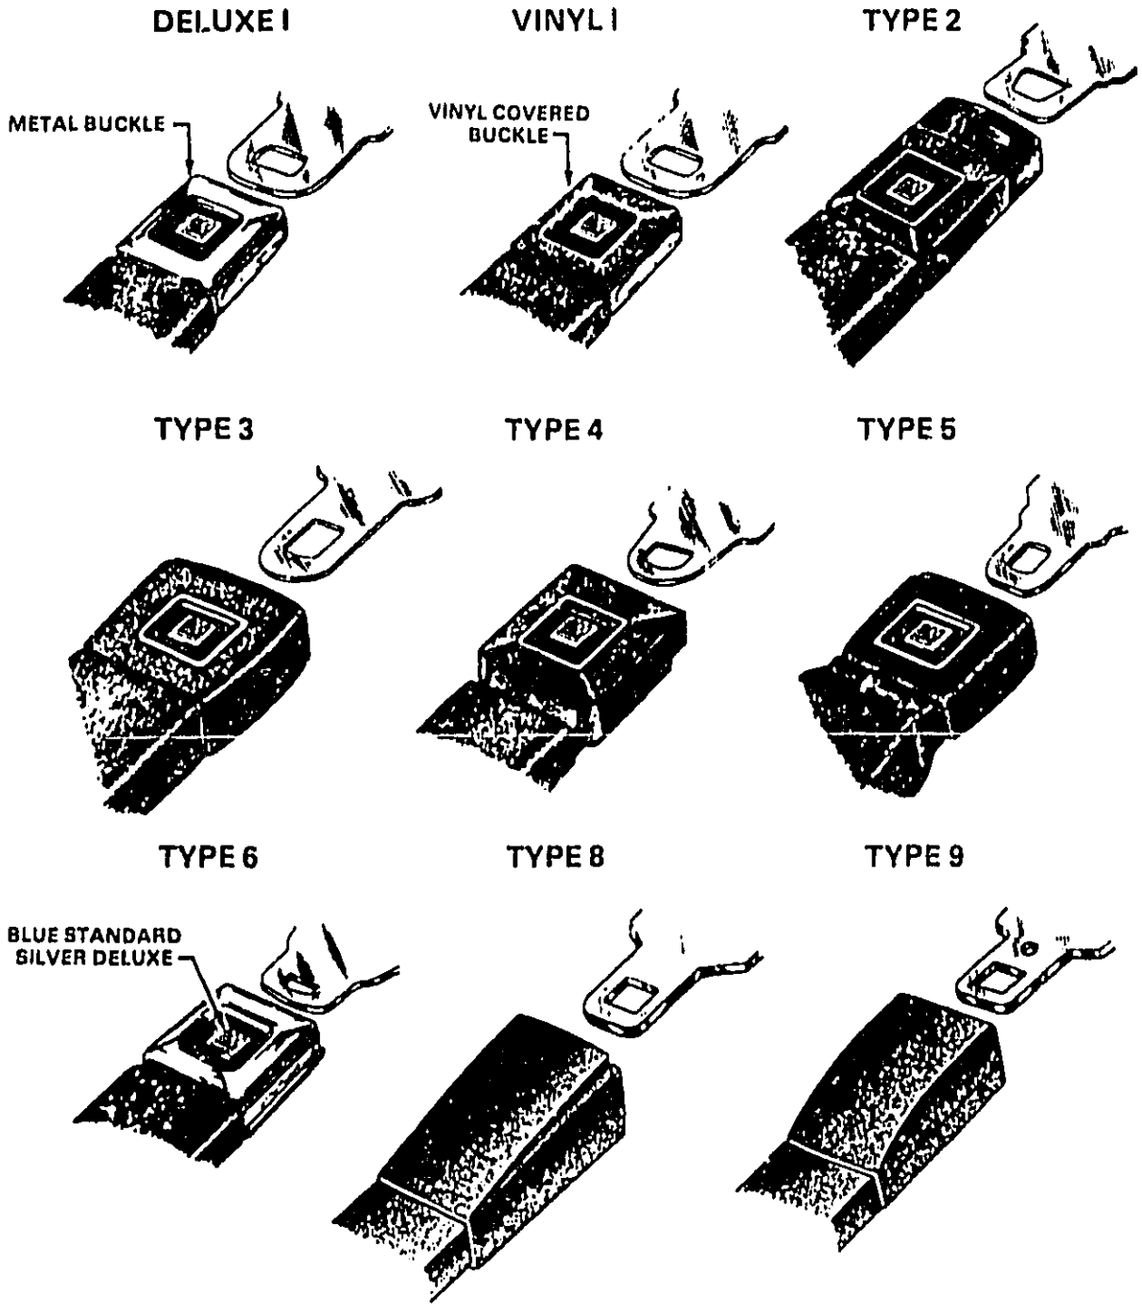
1982 - 93 SEAT BELT BUCKLES

CC14-001
122192



This illustration provides visual identification of the various types of production installed seat belts. The best distinguishing feature is the configuration of the metal "D" ring that inserts into the buckle. The different buckle designs can also be utilized in conjunction with their respective "D" ring to correctly identify the seat belt type. Not all types are available on each model.

NOTE: BUCKLE SIDE INCLUDES CENTER PASSENGER PROVISIONS WHEN APPLICABLE.

*Using Carpet Charts

1. Identify your model # and trim combination. (When viewing the trim combination, note that the chart provides only the last digit of the trim combination.)
2. View type of carpet material for proper location.
3. Return to catalog group for part # using type of material, color and model.
