Ordering Information

To order copies of this document:

- Call: Lucent Technologies BCS Publications Fulfillment Center at 1 800 457-1235
- Write: Lucent Technologies BCS Publications Fulfillment Center P. O. Box 4100 Crawfordsville, IN 47933

For assistance when installing or programming the system:

Call: National Service Assistance Center (NSAC) at 1 800 628-2888 or your Lucent Technologies representative

Notice

While reasonable efforts were made to ensure that the information in this document was complete and accurate at the time of printing, Lucent Technologies can assume no responsibility for errors. Changes or corrections to the information in this document may be incorporated into reissues.

Trademarks

MERLIN LEGEND, 5ESS, ACCUNET, CONVERSANT, DEFINITY, MERLIN MAIL, MERLIN II, MERLIN Identifier, MLX-10, MLX-10D, MLX-16DP MLX-20L, MLX-28D, Magic On Hold, MEGACOM, MultiQuest, MERLIN, and SYSTIMAX are registered trademarks, and 4ESS, AUDIX Voice Power, Fax Attendant System, HackerTracker, PassageWay, Picasso, Lucent Technologies Attendant, MERLIN PFC, MLX-5, MLX-5D, MLX-10DP, , and TransTalk are trademarks of Lucent Technologies in the U.S. and other countries.

Mirage, StarSet, Supra, and Supra NC are registered trademarks of Plantronics, Inc.

PagePac is a registered trademark, and Powermate and Zonemate are trademarks of DRACON, a division of Harris Corp.

Microsoft is a registered trademark and Windows is a trademark of Microsoft Corporation.

IBM is a registered trademark of International Business Machines, Inc.

CLASS is a service mark of Bellcore.

NORTEL is a registered trademark and DMS a trademark of Northern Telecom.

MCI, Prism, and Vnet are registered trademarks of MCI Communications.

Novell and NetWare are registered trademarks of Novell Corporation.

Release 1.1 Enhancements

Refer to *Release 1.1 Notes* for detailed descriptions of Release 1.1 enhancements. Release 1.1 includes all Release 1.0 functionality plus the enhancements described in the following sections.

Language Selection

This selection allows you to program the system for the display of prompts, menus, and messages on MLX display telephones in English, French, or Spanish. You can also program the following options in any of these languages, independently of the system language:

- Individual extensions with MLX telephones
- System Programming and Maintenance (SPM)
- System programming reports
- SMDR report headers

MLX-10D[®], MLX-20L[®], and MLX-28D[®] display telephones and MLX-10[®] nondisplay telephones are available in three separate versions, with factory-set buttons in English, Spanish, or French. (The MLX-10DP[™] is available in the English version only.) In addition, user and operator guides and telephone tray cards are available in all three languages.

Programming and Maintenance

Programming and maintenance enhancements include the following:

- Additional Inspect capability in system programming
- Editing capability (Backspace selection) in extension programming
- Improvements to system reports
- An access log that records the last 20 times maintenance or system programming has been accessed
- Longer (20-second) gap between ring cycles for programming mode and Forced Idle tone

Operational

System operational enhancements include the following:

- Automatic selection of an SA button when Conference is invoked (Hybrid/PBX mode)
- Prompting through Conference feature on MLX display telephones
- Relocation of the More prompt on the MLX-20L display
- Display of the number saved on a programmed Last Number Dial or Saved Number Dial button when the button is inspected

SPM

SPM enhancements include operation in English, French, or Spanish; faster backup and restore; and automatic on-screen display of reports as they are created, with a Browse capability for reading the reports.

Equipment

Additional equipment includes the 8102 and 8110 analog telephones, four headsets, two headset amplifiers, and a transparent protective cover for the MLX-10 and MLX-10D telephones. The 8102 and 8110 telephones are also compatible with Release 1.0.

PF Registration

PF registration number AS5USA-65646-PF-E is assigned by the FCC for operating the MERLIN LEGEND[®] Communications System in Hybrid/PBX mode in the United States. (The PF registration is also applicable to Release 1.0 systems.)

Release 2.0 Enhancements

Refer to *Release 2.0 Notes* for detailed descriptions of Release 2.0 and later enhancements. Release 2.0 includes all Release 1.1 functionality plus the enhancements listed below.

Programming

Programming enhancements include the following:

- Extension Copy is a feature that reduces programming time by allowing the use of any extension as a template for programming another extension or block of extensions through centralized telephone programming.
- Integrated Administration provides a single interface through Integrated Solution III (IS III) for programming entries common to the MERLIN LEGEND Communications System and AUDIX Voice Power^w.
- Any SPM Version 2.xx (where xx is replaced by numbers) provides a Convert function for use in upgrading the system from Release 1.0 or 1.1. This function converts a backup file from a Release 1.0 or 1.1 system to Release 2.0 and later format, allowing reuse of existing system programming on the upgraded system.
- Forced idle reductions keep system interruptions at a minimum. In general, the smallest necessary component is forced idle during programming activities. For example, renumbering a single extension idles only one extension. Only a few system-wide programming activities, such as setting the system mode and system renumbering, idle the entire system.

Operational

System operational enhancements include the following:

- Coverage VMS Off is a feature that prevents incoming outside calls from going to voice mail. (All other coverage remains active as programmed.) The feature is programmed extension by extension, either through extension programming or through centralized telephone programming.
- A Night Service group can be programmed to include either extensions or a calling group as members. However, you should not program both individual extensions and a calling group into the Night Service group because individuals will not have a chance to answer before calling group members do.
- When AUDIX Voice Power sends a Leave Message notification to an extension, the system identifies the voice mail system as the sender of the message. When the voice mail subscriber uses the Return Call feature, the call goes to any available voice mail port, not just to the specific port that generated the message. This reduces the chance of getting a busy port.

- Coverage receivers can call coverage senders and have the call receive coverage treatment. If a receiver calls a sender for whom he or she is covering, and the sender is busy or unavailable, the call proceeds to other points of coverage. It does not come back to the receiver who originated the call.
- Enhancements to display prompts include automatic posting of a Do Not Disturb message (for MLX display telephones or other multiline telephones, a Posted Message button must be programmed for the Do Not Disturb message to be posted automatically). When a user activates the Do Not Disturb feature, and confirmation messages when a user activates Hold, Privacy, Saved Number Dial, and Transfer.
- Direct Inward Dialing (DID) trunk emulation on a T1 facility provides up to 24 DID channels on a single DS1 interface, instead of requiring 24 separate physical trunks.
- A telephone user can send a timed flash (switchhook flash) on a loopstart trunk call on a System Access (SA) button.

Fax Attendant System™

Fax Attendant is an application for sending and receiving fax messages; its interface is similar to the voice mail interface provided by AUDIX Voice Power. Fax Attendant System, which co-resides with AUDIX Voice Power on the IS III platform, provides the following services:

- Fax Call Coverage. Receives and holds messages for subscribers whose fax machines are busy or out of paper. This service also allows a subscriber to have a personal fax number without having a fax machine.
- Fax Mail. Allows subscribers to create and use fax distribution lists, send and receive fax messages, and record personal greetings for incoming fax calls.
- Fax Response. Prompts callers to select and receive faxes from a customer-created menu of choices, using touch-tone responses.

408 GS/LS-MLX Module

The 408 GS/LS-MLX module (Releases 2.0 and higher only) combines four line/trunk jacks for ground-start or loop-start trunks and eight extension jacks for MLX telephones on a single module in the control unit.

Primary Rate Interface (PRI)

Primary Rate Interface (PRI) enhancements include the following:

- Connectivity to the 5ESS® Generic 6
- Multiple incoming calls to directory number
- Call-by-Call Service Selection
- Password handling for FTS2000
- Extension ID as Calling Party Number for Automatic Number ID (ANI)

Maintenance

Maintenance enhancements include the following:

- Clear descriptions of module test failures
- Optional printing of hard copy of error logs
- Display that correlates extension numbers to slot/port and logical ID
- Display of the slots, trunks, and extensions that are maintenance busy
- Internal digital switching element (DSE) loopback test for all modules
- B-channel loopback test for MLX modules
- B-channel line or call service states display
- Error log entries for dual-port RAM errors

Release 2.1 Enhancements

Refer to *Release 2.1 Notes* for detailed descriptions of Release 2.1 enhancements. Release 2.1 includes all Release 2.0 functionality plus the enhancements listed below.

Operational

System operational enhancements include the following:

- When a call is forwarded to a multiline telephone that has an Auto Dial or DSS button programmed for the forwarding telephone, the green light next to the Auto Dial or DSS button for the forwarding telephone does not flash.
- People answering calls received on Cover buttons are allowed to generate touch tones if their telephones are not outward- or tollrestricted.
- Calls received on personal lines with Do Not Disturb on go immediately to coverage instead of waiting for the coverage delay interval.
- A call put on hold at a Cover button can be added to a conference by someone who has a personal line for the call.
- A call put on hold at a Cover button can be picked up by any person who has a personal line for the call.
- Calls that have been put on hold at a Cover, SA, Shared SA, or Pool button can be picked up by a person who has a personal line button for the call.
- An inside call on hold at an SA button can be picked up and transferred by any person with a Shared SA button corresponding to the button with the held call.
- Calls that are on hold awaiting transfer can be picked up by any user who has a personal line for the call.
- Beginning with Integrated Solution III Version 1.2, the automatic reconciliation program that was run automatically at 3:00 a.m. has been disabled and can be invoked manually from the User Maintenance menu.
- When a telephone is programmed for Forced Account Code Entry, account codes do not have to be entered when using a programmed Loudspeaker Paging button. In addition, an SMDR record is not generated for calls made to paging ports.

- When an MLX telephone, other than an MLX-20L, is plugged into an MLX port and the Personal Directory does not contain any entries, the allocation of the Personal Directory resource is released. If there are any entries in the Personal Directory, the Personal Directory allocation and the entries in the Personal Directory are saved in the MLX port.
- SMDR call records for calls made on PRI facilities are more accurate than SMDR call records for calls made on non-PRI facilities. Outgoing calls made on PRI facilities receive "answer supervision." Consequently, SMDR timing for calls made on PRI facilities begins when the call is answered. Timing for calls made on non-PRI facilities begins when dialing is completed. Therefore, an SMDR call record is not generated when a call made on a PRI facility is not answered at the far end.
- The Call Type field and the Called Number field on the SMDR report have been changed for both the Basic and ISDN report formats.
- An 012 port that is programmed as a *generic* voice messaging interface (VMI) port can transfer an outside call to an outside number.
- In a system where the transfer audible option is programmed for Music On Hold and a music source is provided, outside callers who are transferred to a calling group and are waiting in the queue or who are parked or camped-on hear music while they are waiting. Internal callers never hear music on hold while waiting in the calling group queue or when they are parked, camped-on, or being transferred to another extension.

Installation and Hardware

Installation and hardware enhancements include the following:

- The control unit covers for the MERLIN LEGEND Communications System are the same easy-to-use covers as those for the MERLIN® II Communications System.
- A new 012 (T/R) module [apparatus code 517G13 (28) or higher letter] contains a built-in ring generator. The maximum ring equivalency number (REN) supported is 2.2, and the module rings four ports at one time. Bridging of single-line telephones is not supported due to poor transmission quality.
- A new 008 OPT module (labeled "with RING GEN.") contains a built-in ring generator. It rings four ports at a time.
- Ferrite cores for the power supply modules are shipped from the factory to comply with FCC Part 15 requirements.
- 3129-WTWA (touch-tone outdoor telephone equipped with cast aluminum housing and armored handset cord with bell ringers)
- 3129-WRWA (rotary-dial outdoor telephone equipped with cast aluminum housing and armored handset cord with bell ringers)
- 3129-WAWA (auto dial outdoor telephone equipped with cast aluminum housing and armored handset cord with bell ringers)
- 3129-WNWA (nondial, automatic ringing on dedicated circuit outdoor telephone equipped with cast aluminum housing and armored handset cord with bell ringers)

Equipment and Operations

Equipment and operations enhancements include the following:

- A new release (Version 2.16) of the System Programming and Maintenance (SPM) software to support international use.
- Support of PRI connection to DEFINITY® Communications Systems
- MLX-10DP telephone, identical to an MLX-10D, except that it provides a jack for access to the PassageWay[™] Solution and PassageWay Direct Connection Solution application.

Additional Application Packages, Telephones, Adjuncts, and Adapter Additional application packages, adjuncts, and adapter enhancements

include the following:

- A Lucent Technologies Digital Announcer Unit, compatible with all call management systems and tip/ring applications currently available for the MERLIN LEGEND Communications System.
- The HackerTracker[™] system software enhancement to the Call Accounting System (CAS) detects abnormal calling activity by allowing monitoring of facilities or authorization code usage.
- A new digital Magic on Hold unit is available in three configurations:
 - Basic Prerecorded Package
 - Personalized Package
 - Custom Production Package
- The MERLIN® Identifier application enables people to receive, store, and use information provided by the local telephone company, specifically, the telephone number of a caller in an area where the service is also supported.
- An Off-Premises Range Extender (OPRE) supports off-premises operation with an off-premises extension capability and extended range operation for tip/ring devices as well as variable gain to improve voice transmission levels.
- PagePac[®] Plus Loudspeaker Paging Systems do not require system adapters. The controller provides 8 built-in zones (expandable to 56 zones by using up to 3 16-zone expansion units), group zones, talkback, night bell, operator override, tones, door supervision, microphone input, and system access security codes as standard features.
- PassageWay Solution (Release 1.0) software consisting of four applications that run with Microsoft[®] Windows[™] 3.1 or later and provide an interface between an IBM[®]-compatible personal computer and the MERLIN LEGEND system.
- Four single-line telephones with memory buttons: 710, 715, 725, and 730.
- Four specialty handsets compatible with all MLX telephones and the 3101-series, 3178-NHL, 8102, and 8110 single-line telephones.

Release 3.0 Enhancements

Release 3.0 includes all Release 2.1 functionality plus the enhancements listed below.

Equipment

New hardware includes a variety of components. Additional details are included elsewhere in this book.

- CPU modifications include:
 A processor running at 16 MHz with a 32-bit wide data bus
 1.5 Mbytes of non-volatile (battery-backed) RAM
 4.0 Mbytes of Flash ROM
 PCMCIA memory card interface
 A full-duplex 1200/2400 bps modem
 Error/Status code display for maintenance support
- An 800 GS/LS-ID line/trunk module delivers the calling party's telephone number to the customer premises (MLX display telephones only) if the service is subscribed to by the customer and if it is supported by the caller's local telephone company.
- Support for:

MDC 9000 (6-line, cordless)

MDW 9000 (6-line, cordless, wireless)

8101 (single-line telephone, desk or wall-mount, data/fax jack, selectable positive disconnect)

2500YMGL and 2500 MMGL (single-line desk telephones, selectable positive disconnect)

Picasso[™] Still-Image telephone (for interactive display of still images)

- Videophone 2500 single-line phone with interactive video display
- Pre-fabricated and pre-drilled backboard

Installation, Upgrade Administration, and Maintenance

These are the new MERLIN LEGEND Communications System capabilities:

- SPM (Release 3.18) conversion of translations from Release 1.0, 1.1, 2.0, and 2.1 to 3.0
- Remote operation at 1200/2400bps
- Advice and feedback administration screens for new Release 3.0 functionality
- PCMCIA Memory Card Interface (a Release 3.0 processor board required) allowing:
 - ---- System software installation
 - ---- System software upgrade

 - Integrated backup and restore of translations Automatic and manual options for backup and restore are available on the system. Automatic backup can be scheduled weekly or daily to fit the customer's needs.
- Inter-digit dialing timer values are administratable
- Inspection of Lines/Trunks displays only those lines and trunks configured on system rather than all 80 facilities
- Stations and facilities in Maintenance Busy (both manual and automatic) can be identified by the maintenance monitor

User Features

Security

The Remote Access feature allows people at remote locations to enter the system by dialing the number of a line or trunk designated for remote access. The system can be programmed to require the remote user to dial a barrier code (a type of password) after reaching the system. In earlier versions, the system-wide barrier code length is fixed at 4 digits. Release 3.0 allows a system-wide barrier code length ranging from a minimum of 4 digits to a maximum of 11 digits, with a default setting of 7 digits. SMDR records are enhanced to provide information for remote access calls. If the remote access call is received on a facility providing Caller ID information (see below), the SMDR report can help trace the call.

Caller ID

Caller information (telephone number) is furnished to MLX display telephones by an 800 GS/LS-ID module using the LS (loop-start) option. This allows customers to screen calls prior to answering the phone, as well as providing calling party information for use with various applications. This function is available only when the customer subscribes to caller identification service from the local telephone company, if the telephone company supports that service.

Shared System Access (SSA)

A telephone may have up to 27 **Shared SA** buttons to expand extension coverage.

Authorization Codes

The Authorization Code feature allows you to make calls using your calling privileges when you are dialing from an extension other than your own. When you enter your authorization code (ranging from 2 to 11 characters and unique across the system), the privileges and restrictions assigned to your home extension override the current restrictions at the host extension. This includes toll restriction, outward restriction, Facility Restriction Level (FRL), Allowed Lists, Disallowed Lists, Night Service Exclusion List, and Dial Access to Pools. All other functions on the telephone are those of the local telephone, not the home extension.

Authorization codes can also be used for the purposes of call accounting through the SMDR printout. The SMDR account code field can hold the authorization code extension number or the authorization code itself.

Direct Voice Mail

If your company has voice mail, this feature allows you to dial a co-worker's voice mailbox directly without ringing that person's extension. Direct Voice Mail is especially useful for transferring calls when a co-worker is not available.

Additional Features

The status of Leave Word Calling (LWC) and Privacy are retained across cold starts.

Caller ID (CLASS^{SM} ICLID and PRI) are available on primary coverage and return from transfer.

Additional Application Packages, Adjuncts, and Adapter Enhancements

PassageWay™ Direct Connection Solution

PassageWay Direct Connection Solution (Release 2.0) is a Lucent Technologies computer telephone integrated product that links a desktop Windows PC to the MERLIN LEGEND's MLX-10DP, MLX-16DP, MLX-20L, or MLX-28D telephone. The Windows applications are: Lucent Technologies Call (autodial/contact manager), Lucent technologies Buzz (screen-pop applications), Lucent Technologies Set (station programming interface), and Log Viewer (call log application). PassageWay Direct Connection Solution (Release 2.0) is the version supported on MERLIN LEGEND 3.0.

PagePal

PagePal connects several Lucent Technologies and other paging systems to the MERLIN LEGEND Communications System. No other system adapter is necessary for loudspeaker paging.

Fax Attendant 2.1.1

Fax Attendant Release 2.1.1., which co-resides with AUDIX Voice Power on the IS III Release 1.2 platform, provides the same functionality as earlier versions, plus the following enhancements:

- Personal Fax Messaging. Inbound faxes can be stored until the subscriber asks that they be printed, at any fax machine he or she specifies, on company premises or off-site (when the subscriber retrieves fax messages remotely).
- Fax Mail. Allows subscribers to send fax messages, get fax messages, record personal greetings, and program outcalling.
- Fax Broadcast. Provides a simple way to send one fax to as many as 1000 fax numbers.

Call Accounting System (CAS) for Windows

This standalone version of CAS takes advantage of the easy-to-use graphical environment offered by Microsoft Windows. Through data communications, it also allows one CAS system to serve multiple business sites.

Group Video Conferencing

Group video conferencing is supported over DS1 (Digital Signal Level 1) facilities with PRI. (Video conferencing has been available since Release 2.0.)

Release 3.1 Enhancements

Release 3.1 includes all Release 3.0 functionality plus the toll fraud and security enhancements listed below.

Star Codes

Star codes are dialable codes for services provided by the CO. The user has to contract with the CO to get these codes activated.

With this release, users can now add a star (*) code to Allowed and Disallowed Lists to help prevent toll fraud. The MERLIN LEGEND system checks if the star codes are allowed. If allowed, the system then checks the remaining dialed digits against the calling restrictions.

As a security enhancement, *03 requires a technician to enter a maintenance password to access test procedures.

Second Dial Tone Timer

Users can program a delay period (Second Dial Tone Timer) during which no dialing is allowed. This is useful in cases when the CO sends a second dial tone (such as after a star code); the user may start dialing before getting the second dial tone, creating a risk of toll fraud or misrouted calls. If the timer is programmed and dialing is attempted during the delay, the call is not completed.

Trunk-to-Trunk Transfer

This feature allows or disallows trunk-to-trunk transfer on a per-station basis. The default setting for all stations is restricted (disallowed).

Toll Fraud Defaults

This feature changes these default settings:

- No station or remote access user with a barrier code may dial access to any pool.
- Disallowed List 7 contains numbers most commonly abused for toll fraud: 0, 10, 11, 1809, 1700, 1900, 976, 1ppp976 (p=any number or character), *. Assign this list to extensions as needed.
- VMI ports are maximally restricted. Outward restriction is on and they are assigned to Disallowed List 7.
- FRL settings for VMI ports is 0, for local calls is 2, and for toll calls is 3.

Release 4.0 Enhancements

Release 4.0 includes all Release 3.1 functionality plus the enhancements listed below.

System Functionality

The MERLIN LEGEND Communications System functionality is enhanced to include the following:

- An expanded dial plan supporting up to 200 tip/ring devices.
- National ISDN BRI service support for voice and data connectivity to the CO. Data speeds are 14.4 kbps for analog data and up to 64 kbps for digital data. Release 4.0 supports the IOC Package "S" and Multiline Hunt service configurations.

 Certified 2B-data video/data applications that connect to MLX ports and use NI-1 BRI, PRI, or T1 Switched 56 network interfaces to make outside connections.

NOTE:

The 008 MLX and 408 MLX modules must have firmware vintage other than 29. An earlier or later vintage firmware is supported.

The use of T1 facilities for digital data transmission of up to 56 kbps per T1 channel.

Equipment

New hardware includes two new modules. They are:

- An 016 module supporting 16 tip/ring devices and four TTR's. All 16 ports can ring simultaneously. The module's ringing frequency (default 20 Hz) can be changed through programming to 25 Hz for those locations that require it.
- An 800 NI-BRI module supporting high-speed data and video transmission.

Maintenance Support

The R4.0 software includes a Provisioning Test tool that technicians can use to verify the operational status of installed NI-1 BRI lines.

User Features

Product Enhancements

The following enhancements are added:

- Delay Call Forwarding. Each user can program a Forwarding Delay setting for calls that are forwarded using Forward, Remote Call Forwarding, or Follow Me. The forwarding delay is the number of times a call rings at the forwarding extension before the call is sent to the receiver. During the delay, the user may screen calls by checking the displayed calling number (if it is available). The delay can be set at 0 to 9 rings. The factory setting for Forwarding Delay is 0 rings (no delay).
- Voice Announce on the QCC. The QCC operator can use the fifth Call Button to announce a call on another user's speakerphone if the destination telephone has a Voice Announce-capable SA button available. QCCs cannot receive Voice Announce calls; they are received as ringing calls. The factory setting for the fifth Call button is Voice Announce disabled.
- Timebased option for overflow on Calling Group. If the Overflow Threshold Time is set to a value between 1–900 seconds, calls that remain in the Calling Group Queue for the set time are sent to the Overflow Receiver. This is in addition to the *number* of calls that are in the Queue (previously, the only way to send calls to the Overflow Receiver). If the Overflow Threshold Time is set to 0, Overflow by time is off. The factory-set time limit is 0 (overflow by time is off).

Downloadable Firmware for 016 T/R board and the NI-BRI board. The PCMCIA technology introduced in Release 3.0 continues to support these two new boards in Release 4.0 for installation and upgrade. A Release 3.0 or later processor is required for PCMCIA technology.

Single-Line Telephone Enhancements

The following enhancements are added to the single-line telephones:

- Disable Transfer. Through centralized programming, the system manager can disable the ability to transfer calls by removing all but one SA or ICOM button from the telephone.
- No Transfer Return. When a handset bounces in its cradle, the MERLIN LEGEND system interprets this as a switchhook flash and attempts to transfer a call. This causes unintended ringing at the user's phone. In Release 4.0, a flash followed by an on-hook state when a dial tone is present causes the call to be disconnected.
- Forward Disconnect. All ports on 012 and 016 modules now send forward disconnect to all devices connected to them when forward disconnect is received from the CO. This is a non-administrable operation.

System Security

Greater system security is achieved by requiring a 7-digit maintenance password when using SPM to perform remote administration via the Remote Access Feature.

Release 4.1 Enhancements

Release 4.1 includes all Release 4.0 functionality plus the enhancements listed below. There are no hardware changes in Release 4.1.

Coverage Timers Programmed for Individual Extensions

Beginning with Release 4.1, coverage timers, which control the duration of the delay before calls are sent to each level of coverage, are changed as follows:

- —The Group Coverage Ring Delay (1–9 rings) is programmed on individual extensions and replaces the Coverage Delay Interval programmed system-wide in previous releases.
- The Primary Cover Ring Delay (1–6 rings) and Secondary Cover Ring Delay (1–6 rings) programmed on individual extensions replace the Delay Ring Interval programmed system-wide in previous releases.

These enhancements allow the system manager to customize coverage call delivery to match individual extensions' call-handling requirements.

Night Service Coverage Control

Beginning with Release 4.1, a system manager can enable the Night Service Coverage Control option to automatically control the status of telephones programmed with Coverage VMS (Voice Mail System) Off buttons according to Night Service status.

When Coverage Control is enabled and the MERLIN LEGEND Communications System is put into Night Service, all programmed Coverage VMS Off buttons are automatically turned off (LED is unlit) and all eligible outside calls are sent to the assigned voice messaging system calling group with normal ringing delay. When Night Service is deactivated during the day, all programmed Coverage VMS Off buttons are automatically turned on (LED is lit) and voice mail coverage is disabled for outside calls.

Users can override the Coverage VMS Off button status at any time by pressing the programmed Coverage VMS Off button to turn the LED on or off.

Night Service Group Line Assignment

Beginning with Release 4.1, a system manager can assign lines to Night Service groups to control handling of after-hours calls received on individual lines. This capability replaces the automatic assignment to Night Service groups of only those lines that ring on the Night Service operator console. An outside line must be assigned to a Night Service group to receive Night Service treatment.

With this enhancement, Night Service can be activated and deactivated on lines that do not appear on operator consoles (for example, personal lines), and lines appearing at operator positions can be excluded from Night Service.

Forward on Busy

Beginning with Release 4.1, the Forward, Follow Me, and Remote Call Forward features are enhanced to remove the requirement that a call must be ringing at an extension before it can be forwarded. With the Forward on Busy enhancement, a call to an extension with no available **SA** (System Access) or **ICOM** (Intercom) buttons is forwarded immediately to the programmed destination, preventing the caller from hearing a busy signal from the intended call recipient's extension.

Maintenance Testing for BRI Facilities That Are Part of Multiline Hunt Groups (MLHGs)

Beginning with Release 4.1, the NI-1 BRI (National Integrated Services Digital Network-1 Basic Rate Interface) Provisioning Test Tool is enhanced to include testing for BRI facilities that are part of Multiline Hunt Groups (MLHGs). The NI-1 BRI Provisioning Test Tool is used by Lucent Technologies maintenance personnel on MERLIN LEGEND Communications Systems that include a 800 NI-BRI module. Technicians use the tool during system installation and maintenance to test the functionality of the BRI lines and report analyzed results.

Release 4.2 Enhancements

Release 4.2 includes all Release 4.1 functionality plus the enhancements listed below. There are no hardware changes or Release 4.2.

 Additional Network Switch interface and Services Options for ISDN Primary Rate Interface (PRI)

Release 4.2 of the system supports connectivity to MCI[®] or local exchange carrier (LEC) PRI services and to the following central office switch types (in addition to the 4ESS and 5ESS switch types that are currently available for AT&T Switched Network Services):

- Nortel[®] DMS[™]-100 Generic BCS 36 for local exchange carrier services
- ---- Nortel DMS-250 Generic MC107 serving the MCI network
- Digital Switch Corporation DEX600E Generic 500-39.30 serving the MCI network

Beginning with Release 4.2, the following MCI PRI and local exchange carrier (LEC) PRI services (along with the AT&T Switched Network Services) can be provided to users of the MERLIN LEGEND Communications System:

- ---- MCI Toll Services for DMS-250 or DEX600E switch type:
 - MCI Prism[®] service for domestic outgoing long-distance and international voice calls; for domestic outgoing 56-kbps restricted, 64-kbps unrestricted, and 64-kbps restricted circuit-switched data calls
 - MCI VNet[®] service for incoming and outgoing domestic and voice calls; for 56-kbps restricted, 64-kbps restricted, and 64-kbps unrestricted circuit-switched data calls
 - □ MCI 800 for domestic, toll-free, incoming voice calls
 - □ MCI 900 service numbers
- LEC services for DMS-100 switch types:
 - DMS Virtual Private Network service for calls between the MERLIN LEGEND Communications System and another communications system (such as another MERLIN LEGEND Communications System)
 - DMS INWATS (Inward Wide Area Telephone Service) for domestic, toll-free, incoming voice calls
 - DMS OUTWATS (Outward Wide Area Telephone Service) for domestic, outgoing, long-distance voice calls
 - DMS FX (foreign exchange) to provide local call rating for calls from the local exchange to the area serviced by the foreign exchange.

DMS Tie Trunk to provide private exchange call rating for calls placed on a dedicated central office facility between the MERLIN LEGEND Communications System and another communications system (such as another MERLIN LEGEND Communications System)

Improvements to Station Message Detail Recording (SMDR) and Support for MERLIN LEGEND Reporter Application

The SMDR feature is enhanced to provide more details about calling group agent activities and help system managers assess the effectiveness of call centers, in terms of both agent performance and the adequacy of facilities to handle inbound calls. These improvements apply to calling groups that are programmed as Auto Login or Auto Logout type. The SMDR and MERLIN LEGEND Reporter features listed are administrable:

- TALK Field. For Auto Login and Auto Logout calling groups, the TALK field records the amount of time a calling group agent spends on a call.
- DUR. (DURATION) Field. For Auto Login and Auto Logout calling groups, call timing begins when a call arrives at MERLIN LEGEND Communications System and not after a preset number of seconds. Call timing ends when the call is disconnected; either the caller or the agent hangs up. This allows the system manager to determine how long a caller waited for an agent's attention.

— Coding of Calls on Reports. An asterisk (*) appears in the call record when:

- A call is not answered by an Auto Login or Auto Logout calling group agent and is abandoned while waiting for an agent.
- b. The call is answered by someone not a member of an Auto Login or Auto Logout calling group.

An exclamation point (!) signals that an Auto Login or Auto Logout agent handled a call that was answered by someone who was not a member of that Auto Login or Auto Logout with Overflow group. An ampersand (&) in the call record indicates that the group's overflow receiver answered the call.

MERLILN LEGEND Reporter. MERLIN LEGEND Reporter provides basic call accounting system reports for all incoming calls to Auto Login or Auto Logout type calling groups. MERLIN LEGEND Reporter assists in determining the effectiveness of calling group agents, assessing the level of service provided to callers, and ascertaining whether adequate incoming phone lines and agents are available to handle peak call load. MERLIN LEGEND Reporter is an administrable option. The default is Off, in which case the Release 4.0 SMDR reports are available. If this option is set to On, the following reports are provided:

- Organization Detail Report
- Organization Summary and Trends Report
- Selection Detail Report
- Account Code Report
- □ Traffic Report
- Extension Summary Report
- Data Report
- □ Talk and Queue Time Distribution Report
- Time of Day Report
- ICLID Call Distribution Report
- □ Facility Grade of Service Report

Maintenance Enhancements

---- Change to Permanent Error Alarm

Beginning with Release 4.2, the most recent permanent error alarm is not shown on the System Error Log menu screen but is available as an option from that screen. For details, refer to the Maintenance section of the technician guide, *Installation*, *Programming and Maintenance*.

---- Enhanced Extension Information Report

Beginning with Release 4.2, the Extension Information Report includes the Extension Status (ESS) and supervisory mode for each extension.

Release 5.0 Enhancements

Release 5.0 includes all Release 4.2 functionality plus the enhancements listed below.

Computer Telephony Integration (CTI)

Beginning with Release 5.0, a PassageWay® Telephony Services CTI link from the MERLIN LEGEND Communications System to a LAN server running Novell® NetWare® software allows Lucent Technologies-certified telephony applications to control MLX and analog multiline telephone (BIS only) operations that are *monitored* by the applications. The physical connection for the CTI link is an MLX port on a 008 MLX or 408 MLX module on the MERLIN LEGEND Communications System control unit and an ISDN link interface card plugged into the customer's server. The feature is available for Hybrid/PBX mode systems only.

System Requirements for CTI link

Refer to Chapter 2 of the *Network Manager's Guide* for detailed installation instructions.

The following equipment and software are required:

- An Intel i386, Intel i486, or Pentium class computer with at least 16 megabytes of RAM. Additional memory may be needed if additional applications will be running on the server machine.
- NetWare Version 4.10 or Version 3.12
- 5 megabytes of disk space available on the SYS (system) volume
- Telephony Services for NetWare software, Releases 2.21 or later, installed
- An Eicon/G. Diehl SCOM card for the CTI link
- A free 8- or 16- bit ISA slot for the Eicon/G. Diehl SCOM card
- System software Release 5.0 or later installed on the MERLIN LEGEND Communications system
- The MERLIN LEGEND configured in Hybrid/PBX mode
- An MLX port board (using firmware Version 28 or later, except Version 29) installed in the MERLIN LEGEND NOTE:

The 008 MLX and 408 MLX modules must have firmware vintage other than 29. If the module has firmware 29, administering a CTI link on the module is prevented. An earlier or later vintage firmware is supported.

- If the MERLIN LEGEND switch has only one MLX port board, you also need System Programming and Maintenance (SPM) software, Version 5.01, to administer the CTI link
- One port on the MLX board is used for the CTI link. This port cannot be a potential operator port (2,3,4,6,7,and 8 must be available) or a console programming port
- For a NetWare 3.12 installation, ensure that either NWSNUT.NLM, Version 4.11 or later, and TUI.NLM, Version 1.04 or later, is obtained from Novell and installed in the SYS:\SYSTEM directory

NOTE:

To obtain these NLMs from Novell, access either the Novell web site (http://www.novell.com) or the Novell ftp site (ftp.novell.com). First, download IPXRT4.EXE and follow the directions in the associated readme file. Then, download NWSNUT.NLM and TUI.NLM.

- Basic Call Control. A CTI link application on a user's computer can assume basic call control of the user's analog multiline or MLX telephone's SA buttons. Basic call control includes:
 - ---- Answering calls arriving on an SA button
 - Making calls from an SA button
 - Hanging up calls
 - --- Hold and retrieving a call on hold at the user's extension
 - --- Conference calls from a DLC or QCC operator

NOTE:

Transfer and 3-way conference, when handled through a CTI link application, provide the original caller's calling number information or other information to the transfer receiver or new conference participant, if the user has screen-pop capability.

Screen Pop. Screen pop occurs when the calling number, called number, or other user-defined identifier (such as an account code that a voice-response unit prompts the caller to dial) is used to display a screen associated with the calling party. For example, Caller ID services can be used to support screen pop on a system that includes a CTI link; using the calling party number as a database key code, information about a caller automatically appears on the user's computer screen when the call arrives at the extension. Depending on the application, screen pop may be available for calls that arrive on line buttons other than SA buttons and/or are answered manually at the telephone rather than by the application.

Screen pop can occur on incoming calls from the following sources:

- ---- Calling group distribution
- ISDN PRI Routing by Dial Plan
- An extension on the MERLIN LEGEND Communications System
 - ---- Remote Access
- NOTE:

In the case of remote access calls, the only information that the application can collect about the caller is the remote telephone number.

- A transfer of a call that was answered by a voice response unit
- A transfer, redirection, or conference of a call that was answered at a DLC or at a QCC

NOTES:

DLCs (Direct-Line Consoles) may use CTI applications. If they do, they perform the same way as other extensions. A DLC assigned to use a CTI link application is a *monitored* DLC. When a DLC is used as a regular operator console and not assigned as a CTI link extension, it is *non-monitored*.

Calls to a QCC non-monitored DLC do not initiate screen pop at the operator position., but when an operator directs a call to an

extension using a CTI application, caller information does initiate screen pop.

Calls transferred from Cover buttons on non-monitored DLCs do not initiate screen pop at the destination extension.

HotLine Feature. The Release 5.0 HotLine feature is designed for retail sales, catalogue sales, and other types of businesses and organizations. It is available in all three modes of system operation. The feature allows a system manager to program a single-line telephone extension as a HotLine. When a user lifts the handset at the HotLine extension, the telephone automatically dials the inside extension or outside telephone number programmed as the first Personal Speed Dial number (code 01) for the extension. At HotLine extensions, calls cannot be transferred, put on hold, or conferenced.

Personal Speed Dial codes can be programmed at the extension prior to HotLine assignment (a system programming function). Alternatively, a Personal Speed Dial code can be programmed from the single-line telephone after HotLine operation is assigned. However, because of security considerations, this is a one-time opportunity. Once the Personal Speed Dial number is programmed, any changes to it or any other extension programming must be performed using centralized telephone programming.

Any type of inside or outside line that is normally available to a singleline telephone can be assigned to a HotLine extension. Generally, the HotLine telephone does not receive calls, and its line should be set to No Ring.

A SECURITY ALERT:

A HotLine single-line telephone accesses a loop-start line, the line should provide and be programmed for Reliable Disconnect. If it is not, a caller may be able to stay on the line after the initial call and access an outside line.

- Call Center Enhancements. Release 5.0 and later systems include Group Calling features that enhance call center operations.
 - Most Idle Hunt Type. In addition to the Circular (factory setting) and Linear hunt types supported in earlier releases, a third hunt type distributes calling group calls in an order based on which agent has waited the longest since transferring or hanging up on an incoming calling group call. For some applications, this hunt type is more efficient than the circular type because it takes into account the varying duration of calls. The system distributes calls based on when an agent last completed a call, not on when he or she last received one. This hunting method ignores non-calling group calls. For example, if an agent transfers a call that arrived on a line not assigned to the calling group, the calling group member's most-idle status is unaffected.

- Delay Announcement Devices. The system manager can designate as many as ten primary delay announcement devices per group rather than the single device for each group that is available in Release 4.2 and earlier systems. Furthermore, an additional secondary delay announcement device can be specified, for a total of ten primary device extensions and one secondary device extension per group.

A primary delay announcement device operates in the same fashion as a single delay announcement device, playing once, as soon as it is available, for the caller who has waited the longest for a calling group agent and has not heard a primary delay announcement. If a secondary announcement device is used, it can use the factory setting, which plays the announcement once, or it can be set to repeat the announcement after a certain amount of time. The system manager programs the time (0–900 seconds) between primary and secondary announcements. This setting controls both the interval between prepetitions of the secondary announcement if it is set to repeat.

The primary and secondary announcement options, when used together, allow an initial message to play for callers, followed by a repeating announcement that, for example, urges callers to stay on the line and wait for a calling group member.

Two or more groups may share an announcement device.

Enhanced Calls-in-Queue Alarm Thresholds. Three Calls-in-Queue Alarm thresholds can be set to more clearly indicate the real-time status of the queue according to the behavior of programmed Calls-in-Queue Alarm buttons. In earlier releases, only one Calls-in-Queue Alarm Threshold setting is available to activate the LEDs at programmed Calls-in-Queue Alarm buttons for a calling group.

Using all three levels, the system manager sets Threshold 1 to the lowest value, Threshold 2 to a middle value, and Threshold 3 to the highest value. A Calls-in-Queue Alarm button indicates the severity of the alarm conditions in the following ways:

- If the number of waiting calls is less than the value programmed for Threshold 1 or drops below that level, the LED is unlit.
- If the number of waiting calls is greater than or equal to the Threshold 1 value but less than the Threshold 2 value, the LED flashes.

- If the number of waiting calls is greater than or equal to the Threshold 2 value but less than the Threshold 3 value, the LED winks.
- If the number of waiting calls is greater than or equal to the highest value, Threshold 3, the LED lights steadily.

NOTE:

A DSS (Direction Station Selector) button that is used as a Calls-in-Queue Alarm button can only indicate two threshold levels, either by flashing or by lighting steadily. If a calling group must use this type of Calls-in-Queue Alarm button, only two threshold levels should be programmed.

If all three thresholds are set to the same value, the result is one threshold only. If two values are the same, then the result is two alarm levels. The factory setting is one call for all three thresholds.

An external alert only signals when the number of calls in the queue exceeds the programmed Threshold 3 value.

MLX-5 and MLX-5D Telephones. The MLX-5 nondisplay and the MLX-5D display telephones are compatible with all system releases. The display telephone includes a 2-line by 24-character display, and both telephones come with 5 line buttons. In systems prior to Release 5.0, the MLX-5 and MLX-5D telephones are treated as MLX-10 and MLX-10D telephones respectively. As of Release 5.0, the system recognizes the MLX-5 and MLX-5D telephones as 5-button telephones.

Design Benefits

Modular components allow easy, cost-effective growth in both size and function. For upgrades from the MERLIN LEGEND Communications System, all wiring and analog MERLIN system telephones can be reused. For upgrades from the MERLIN II Communications System, certain trunk and extension modules can also be reused. The modules are 800, 400, 400EM, 012, 008, and 408.

Menu-driven system programming maintains the customer's command of business operations.

Built-in 1200/2400-bps modem allows fast access to the system by customers, Lucent Technologies personnel, or authorized dealers from a remote location for system programming and maintenance.

Flexible mode of operation saves upgrade costs by allowing system configuration in one of three modes: Hybrid/PBX, Key, and Behind Switch. (The default setting on the 3.0 processor board is Hybrid/PBX.)

Connectivity to other systems in the Behind Switch mode optimizes existing resources by allowing the system to work as part of another MERLIN LEGEND Communications System, System 25, System 75, System 85, DEFINITY 75/85, or other communications system. The control unit can connect to another system's control unit via either an off-premises telephone (OPT) line or an analog or digital tie trunk.

Digital 2.048-MHz bus supplies a 64-kbps channel on each of the 216 time slots.

68EC020 Motorola CPU running at 16 MHz with zero wait states provides fast system performance.

Memory data retention saves time by ensuring that system and extension programming information is retained for 5 days, depending on the system configuration, in case of power failure or system shutdown.

Integrated voice and data capabilities allow users to talk while transmitting data at speeds up to 64 kbps.

DS1 interface can be configured for connection of either T1 or PRI for basic call control with the 4ESS[™] or 5ESS PRI service specifications.

Basic Rate interface (BRI) S/T protocol supports premier digital multiline (MLX) telephones with superior display capabilities and supports the ISDN terminal adapter Data Module for the connection of adjuncts.

Environmental Specifications

The control unit requires a regulated environment and can be located in any room or closet that is temperature-controlled and clean. Do not mount the control unit where it will be exposed to direct sunlight.

In addition, the control unit should not be co-located with air conditioning or ventilation units, compressors, fans and blowers, heaters, arc welders, or other machinery that produces electrical interference.

The control unit is mounted on a Lucent Technologies pre-drilled backboard.

Once installed, it is important to keep the control unit site clear of hazards, such as stacked paper or boxes, that block ventilation. Installing any machinery in the vicinity of the control unit should be avoided. If any pollution-producing work (such as sanding or spray painting) is to be done in the area, care should be taken to protect the unit.

Table 1-4 gives the environmental specifications for the control unit.

Control Unit

Fully loaded ba	sic carrier
Weight:	45 lb. (20.4 kg)
Dimensions:	14 in. wide x 23 in. high x 12 in. deep
	(35.6 cm x 58.4 cm x 30.5 cm)
Fully loaded 2-	carrier system (basic carrier plus 1 expansion carrier)
Weight:	90 lb. (40.8 kg)
Dimensions:	25 in. wide x 23 in. high x 12 in. deep
	(63.5 cm x 58.4 cm x 30.5 cm)
Fully loaded 3-	carrier system (basic carrier plus 2 expansion carriers)
Weight:	135 lb. (61.2 kg)
Dimensions:	37 in. wide x 23 in. high x 12 in. deep
	(94 cm x 58.4 cm x 30.5 cm)

Mean Time Between Failures

(mean/average time the system is expected to operate before any type of failure occurs)

2.4 years

For a system configured with 24 trunks and 50 stations (extensions)

Backboard Mounting Hardware Requirements

This refers to the types of wall construction to which the backboard will be attached.

Type of material

Wood surface Concrete surface, brick, cinder block Plaster, plasterboard Sheet-metal surface Mounting Hardware

Wood screws Masonry anchors Toggle bolts Sheet-metal screws

Hardware has a combined pullout force of 650 lb. (294.8 kg). When mounting to sheet-metal walls, attach to structural members.

Location

Within 5 ft. (1.5 m) of dedicated AC power outlet (1 plug per carrier) Within 1000 cable ft. (304.8 m) of telephones

Heat Dissipation

Fully loaded basic carrier500 Btu/hr(35 cal/sec)Fully loaded 2-carrier system1000 Btu/hr (70 cal/sec)(basic carrier with one expansion carrier)1500 Btu/hr (105 cal/sec)Fully loaded 3-carrier system1500 Btu/hr (105 cal/sec)(basic carrier plus two expansion carriers)

Power Requirements

Basic carrier	117 VAC	60 Hz -15% to 10%	5.4A
2-carrier	117 VAC	60 Hz -15% to 10%	10.8A
3-carrier	117 VAC	60 Hz -15% to 10%	16.2A

Temperature/Humidity Range

40°-104°F (4°-40°C)

20%-80% relative humidity

Ventilation Clearances

1 in. (2.5 cm) on right and left sides

Radio Frequency Interference, Tolerance 1.0 V/m

Electromagnetic Interference (EMI)

To reduce electromagnetic interference emissions (possible interference problems with handheld telephones), check the date of manufacture of the CPU (517A27) units. If they were manufactured before April 1993, replace them with a later version.

- For the control unit, do not use an AC outlet that is controlled by a wall switch or some other switch.
- Use an approved ground (AC receptacle for 3-prong plug).
- Do not install the control unit outdoors.
- Do not place the control unit near extreme heat (furnaces, heaters, attics, or direct sunlight).
- Do not expose the control unit to devices that generate electrical interference (such as arc welders or motors).
- Do not place anything on top of carriers.
- Do not install the control unit under any device that may drip fluid, such as an air conditioner.
- Each auxiliary power unit requires one outlet.
- Do not expose the control unit to moisture, corrosive gases, dust, chemicals, spray paint, or similar materials.

Power and Grounding

Proper power and grounding are essential for correct and safe functioning of the system.

Power Specifications

The system control unit plugs into a 117-VAC outlet. To avoid accidental disconnection of the system, this outlet should not be controlled by a wall switch.

Each carrier unit requires its own power supply. Each power supply requires a maximum current of 5.4 amps. Therefore, if expansion carrier units are added to the system, extra AC outlets may be needed.

Grounding Requirements

Proper grounding of the installation site protects the system against the following:

- Lightning
- Power surges
- Power crosses on outside lines/trunks
- Electrostatic discharge (ESD)

The local telephone company is responsible for providing protection of outside lines/trunks at the entrance to the site. The protection should consist of the following:

- Carbon blocks or gas discharge tubes connected to an approved ground
- Adequate bonding of the outside line/trunk protector ground and the power company ground

An improper ground can result in equipment failures and service outages. Verify that the AC power uses an approved ground for its primary ground, that all voltage-limiting devices are grounded to an approved ground, and that the ground is one of the approved grounds listed below. The following is a list of approved grounds, starting with the most preferred:

- Building steel
- Acceptable water pipe, must be a metal, underground water pipe at least ½-in. (30.4 cm) in diameter, and in direct contact with the earth for at least 10 ft. (3 m).
 - It must be electrically continuous so that the protector ground is connected. (Check for insulated joints, plastic pipe, and plastic water meters that might interrupt electrical continuity.)
 - A metallic underground water pipe must be supplemented by the metal frame of the building, a concrete-encased ground, or a ground ring.
 - Other local metal underground systems or local underground structures such as tanks and piping systems
 - Rod and pipe electrodes, a 5/8-in. (1.6-cm) solid rod or ¾-in.
 (1.9-cm) conduit or pipe electrode driven to a minimum depth of 8 ft.
 (244 cm)
 - Plate electrode, a minimum of 2 square ft. (61 square cm) of metallic surface exposed to the exterior soil
- Concrete-encased ground, which must be an electrode, consisting of one of the following:
 - At least 20 ft. (6.1 m) of one or more steel reinforcing rods, each being at least 0.5-in. (1.27 cm) in diameter
 - 20 ft. (6.1 m) of bare copper conductor not smaller than #4 AWG, encased in 2 in. (5 cm) of concrete. This electrode must be located within and near the bottom of a concrete foundation or roofing that is in direct contact with the earth.
 - Ground ring, consisting of at least 20 ft. (6.1 m) of bare copper conductor not smaller than #2 AWG, encircling the building. The ground ring must be in direct contact with the earth and buried at least 2.5 ft. (77 cm) below the earth's surface.

A WARNING:

Do not use a metal underground gas piping system. This is a safety risk. For most power surges, the following standard grounding requirements provide adequate lightning and surge protection:

- Properly wired/grounded/bonded outside line protectors
- Properly wired/grounded AC outlet
- Properly grounded single-point ground bar
- Properly wired connection between single-point ground and power supplies

Additional Power Surge Protection

The 391A1 power supply has built-in AC line protection. This built-in protection handles almost all situations.

Occasionally, additional protection may be needed if the customer is located in a heavy lightning area. A 147A surge protector can be connected to the system to limit surges from the AC lines and outside lines. One 147A protector provides protection for four outside lines. Up to three 146A protectors can be added to the 147A to provide protection for a maximum of 16 outside lines. For more than 16 lines, additional 147A protectors are required.

NOTE

The 147A protector is usually not needed with the 391A1 power supply. It may be needed with the older 391A power supply module in heavy lightning areas.

Complete installation instructions are provided with the protectors.

Hardware and Software Capacities

You can configure the system as a stand-alone unit or as part of a private network. Maximum system capacities are as follows:

Up to 108 simultaneous two-party conversations

IMPORTANT:

If more than 108 conversations are in progress at the same time, blocking can occur.

- Up to 80 line/trunk jacks, including loop-start, ground-start, DID, and tie
- Up to 255 extension endpoints that support a combination of the following:
 - Up to 255 physical extension jacks for tip/ring telephones and adjuncts
 - Up to 127 logical digital data ports (through ISDN terminal adapters connected to jacks on the MLX module) providing RS-232 connections to data terminals and personal computers
- System call-handling capability of 3888 hundred call seconds per hour (ccs/hr)
- Up to three 100D DS1 modules, maximum two per carrier
- Up to five 800 NI-BRI modules, maximum three per carrier (Release 4.0 and later)
- One CTI link when operating in Hybrid/PBX mode

The system has a total capacity of 280 jacks (80 outside lines/trunks plus 200 extensions); however, each MLX module extension jack supports two logical endpoints (extension devices that can operate simultaneously and independently of each other). For example, an MLX telephone with a Multi-Function Module (MFM) plugs into one extension jack, but the jack supports both the telephone and the equipment (for example, a fax or an answering machine) connected to the MFM.

Similarly, although the 100D module has only one jack, it can serve up to 24 endpoints (emulated lines/trunks or PRI lines/trunks). Thus, you can configure the system to connect up to 80 lines/trunks and 255 extension endpoints—a total of 335 endpoints.

The following table, **Table of Hardware and Software Capacities**, lists the hardware and software capacities of the system. Constraining Factors appear with a checkmark (\checkmark) and are explained at the end of the table.

Power failure transfer	20	✓
Traffic (100 call seconds/hr/system)	3888	1
Two-party conversations	108	√
Voice-messaging systems	1	

Table of Hardware and Software Capabilities (continued)

Constraining Factors

This section describes the constraining factors that limit the capabilities supplied in the table above.

Calling Groups

Members of groups. QCCs cannot be members of calling groups because the QCC position is set up as a system operator and has its own queue that is different from the group's queue.

Carriers

The first slot of the basic carrier is used for the processor module.

Coverage Groups

Senders per group. QCCs cannot be senders because they do not have coverage available and use Position-Busy instead.

CTI Link

One CTI link is supported in Hybrid/PBX mode only.

Fax machines with Message-Waiting

The system can support more than 16 fax machines, but those in excess of 16 cannot use fax message-waiting indication.

System Operator Consoles

DLCs. Two consoles are allowed for each MLX or analog module, with a maximum of eight per system. Up to two DSSs can be attached to an MLX operator console, and one is built into the MERLIN II System Display Console.

QCCs. Two consoles are allowed for each MLX module with a maximum of four per system.

Ports (not simultaneously)

Voice-Mail interface. Although the system software supports up to 24 VMI ports, all the VMI ports must be in the same calling group, and the maximum number of extension in a calling group is 20.

Speed Dial

Personal Speed Dial. Single-line and 5- or 10-button telephones only.

System Programming Equipment

Remote access overrides on-site programming except during backup or restore.

Telephones (not simultaneously)

Analog multiline with/without Voice Announce to Busy 17 slots x 8 ports/board.

MLX-20L. RAM limit and the total includes the MLX-20L telephone used for system programming.

All other MLX telephones. RAM limit. An MFM and a ISDN terminal adapter cannot be connected to the same telephone (including the MLX-20L) at the same time.

Single-line. RAM limit

Power failure transfer. 1 for each 4 LS/GS line/trunk jacks.

Traffic (100 call seconds/hr/system)

Assumes 20 percent internal traffic.

Two-party conversations

216 time slots.

Control Unit Modules					
Module	Trunk Type	Extension Type			
Processor	N/A	N/A			
Power supply	N/A	N/A			
008	N/A	Analog multiline telephone; Call Management System; analog data via a modem			
008 MLX	N/A	MLX telephone; digital data device (such as the ISDN terminal adapter)			
		CTI link connected to Passageway Telephony services for NetWare			

008 OPT	N/A	On-premises or off-premises single-line telephone

Specifications

Highlights: 68EC020 processor at 16 MHz, built-in 1200/2400-bps modem; built-in diagnostics; Hybrid/PBX, Key, or Behind Switch mode option; 1.5 MB RAM backup for 4 days; PCMCIA interface

Ports: Three RS-232-C ports. One for debugging (plugged to prevent access), one for SMDR, and one for system administration

Power input: 117 VAC Power output: +5 VDC (10 A), -5 VDC (2.50 A), -48 VDC (2.05 A) Capacity: 54 unit loads

Capacity: 8 analog extensions

Signaling: Analog multiline telephone protocol (40 kbps)

Loop range: 1000 feet (305 m), in-building or in-range out-of-building (with analog IROB protectors) only

Capacity: 8 digital extensions, each with 1 or 2 endpoints (each endpoint assigned a separate extension number), including these extension types:

- CTI link (only one per system)
- digital voice only
- digital voice with Voice Announce to Busy
- digital voice and digital data (via ISDN terminal adapter)
- digital voice and analog data
- digital data only (ISDN Terminal Adapter)

Signaling: BRI S/T protocol (two 64-kbps B channels, one 16-kbps D channel) on a passive bus

Power: 48 VDC phantom power to telephone, 48 VDC over a separate pair (7–8) to an operator console with a DSS

Loop range: 1000 feet (305 m), in-building or in-range out-of-building (with MLX IROB protectors) service only

Capacity: 8 T/R extensions on 2-way voice transmission path with support for telephones with message-waiting LEDs; built-in ring generator; 2 TTRs Notice to Telephone Company: Meets FCC Class C

Ringing current: 75-Vrms, 20-Hz trapezoidal ringing superimposed on -48 VDC.

REN: \leq 1.0 per port

Disconnect signal: 900 ms (T/R short for answering machines, G3 fax, etc.)

Switchhook flash detection: 300–1200 ms Loop resistance: Serves 2-wire loops to 1300 ohms, including extensions

The system recognizes the OPT module as an 012 module having 12 ports. However, the OPT module has only 8 jacks. Therefore, each installed OPT module decreases the system's capacity by 4 ports.

Control Unit M Module	/lodules (<i>cont</i> Trunk Type	inued) Extension Type
012 (T/R) + Ring Generato	N/A r	Single-line telephone; AT&T Attendant; MERLIN MAIL Voice Messaging System; T/R adjunct (such as an answering or fax machine); analog data device (such as a modem)
016 (T/R)	N/A	Single-line telephone; AT&T Attendant, MERLIN MAIL Voice Messaging System; T/R adjunct (such as an answering or fax machine); analog data device (such as a modem)
100D	T1 or PRI	N/A
800 NI-BRI	T1 NI-BRI interface	Certified video applications
400*	Loop-start and TTR	Power failure transfer (PFT) telephone
400EM	Tie trunk	N/A
400 GS/LS/TTR	Loop-start or ground-start and TTR	PFT telephone (button needed for ground-start PFT telephone)
*		

Although these MERLIN II modules are supported, the 400 GS/LS, the 408 GS/LS, and the 408 GS/LS-MLX are the recommended modules.

Specifications

Capacity: 12 T/R extensions on 2-way voice transmission path with support for telephones with message-waiting LEDs; 2 TTRs

Power: 21-VDC, 600-ohm battery source

Ringing current: 105-Vrms, 30-Hz sinusoidal ringing superimposed on -48 VDC; a ring generator must be installed in the power supply module of each carrier that has an 012 module.

REN: ≤ 4.0 per port

Disconnect signal: 900 ms (T/R short for answering machines, G3 fax, etc.)

Switchhook flash detection: 300-1200 ms

Capacity: 16 T/R extensions on 2-way voice transmission path with support for telephones with message-waiting LEDs; 4 TTRs

Power: 40-VDC, 600-ohm battery source

Ringing current: 105-Vrms, 30-Hz sinusoidal ringing superimposed on -48 VDC; a ring generator must be installed in the power supply module of each carrier that has an 016 module.

REN: >=4.0 per port

Disconnect signal: 900 ms (T/R short for answering machines, G3 fax, etc.)

Switchhook flash detection: 300-1200 ms

Capacity: 24 trunks for voice and analog data or 23 trunks for voice and data with 1 channel used for signaling

Mode: Multiplexes 24 or 23 trunks into 1 facility and demultiplexes 1 facility into 23 or 24 trunks

Speed: Up to 64 kbps

Signaling: DS1 over 4-wire; T1 uses robbed-bit or common-channel, PRI uses 23 B + D

 $\label{eq:capacity: Eight modular jacks each supporting one Digital Subscriber Line \\ \ensuremath{\textbf{Mode:}}\xspace \text{National ISDN 1} \\ \ensuremath{\textbf{I}}\xspace$

Speed: Up to 64 kbps

Signaling: ISDN Basic Rate 2B+D

Capacity: 4 trunks, 4 TTRS, 1 PFT telephone

Signaling: Loop-start

Capacity: 4 tie lines

Method of completion: Automatic start, immediate-start, wink-start, or delay-dial-start

Signaling: E&M type 1S, type 1C, type 5

Capacity: 4 trunks, 4 TTRs, 1 PFT telephone Signaling: Loop-start or ground-start, optioned per port

		,
Module	Trunk Type	Extension Type
408	Loop-start	Analog multiline telephone; Call Management System; PFT telephone
408 GS/LS	Loop-start or ground-start	Analog multiline telephone; Call Management System; PFT telephone
408 GS/LS-MLX	Loop-start or ground-start	MLX telephone; digital data device (such as ISDN Terminal Adapter) CTI link connected to Passageway Telephony services for NetWare
800†	Loop-start	PFT telephone
800 DID	Direct Inward Dialing	N/A
800 GS/LS	Loop-start or ground-start	PFT telephone; button needed for ground-start PFT
800 GS/LS-ID	Loop-start or ground-start	Calling number identification on MLX display telephones. Calling number identification is not available on ground-start trunks

Control Unit Modules (continued)

* Although these MERLIN II modules are supported, the 400 GS/LS, the 408 GŠ/LS, and the 408 GS/LS-MLX are the recommended modules. † Although this MERLIN II module is supported, the 800 GS/LS is the

recommended module.

Specifications

Capacity: 4 trunks, 8 extensions, 1 PFT telephone

Extension signaling: Analog multiline telephone (40 kbps)

Trunk signaling: Loop-start trunk, analog voice

 $\label{eq:loop} \begin{array}{l} \mbox{Loop range: 1000 feet (305 m), in-building or in-range out-of-building (with analog IROB protectors) only \end{array}$

Capacity: 4 trunks, 8 extensions, 1 PFT telephone

Extension signaling: Analog multiline telephone (40 kbps)

Trunk signaling: Loop-start or ground-start trunk (optional per port); voice Loop range: 1000 feet (305 m), in-building or in-range out-of-building (with analog IROB protectors) only

Capacity: 4 trunks, 8 digital extensions, 1 PFT telephone, 1 CTI link Extension signaling: BRI S/T protocol (two 64-kbps B channels, one 16kbps D channel) on a passive bus

Trunk signaling: Loop-start or ground-start trunk (optional per port), analog voice

Loop range: 1000 feet (305 m), in-building or in-range out-of-building (with MLX IROB protectors) only

Capacity: 8 trunks, 2 PFT telephones Signaling: Loop-start

Capacity: 8 trunks, 2 TTRs

Transmission: Incoming calls only; 2-way (1-pair) fixed impedance to DID trunks; no outgoing calls

Signaling: Loop-reverse battery; wink-start or immediate-start; accepts touch-tone dialing

Capacity: 8 trunks, 2 PFT telephones Signaling: Loop-start or ground-start

Capacity: 8 lines/trunks, 2 PFT telephones, 2 TTRs

Signaling: Loop-start or ground-start

Protocol: Requires calling number identification service from central office

Adjunct Summary

Equipment Type	Specifications	Lucent Technologies Products
Alerts (AC)*	 Any audible or visual alert that operates on 20–30 Hz ringing signals Associated with a specific extension (supplemental alert) or works on a programmed trunk port (external alert) 	External Ringer—Loud External Ringer
Alerts (DC)	 Any audible or visual alert that operates on 48-VDC ringing signals Associated with a specific extension (supplemental alert) or works on a programmed trunk port (external alert) 	Alert bell Alert horn Alert strobe Alert chime Alert deluxe horn Alert switch
Answer/ record machine [*]	 Industry-standard machine Low ringer equivalence (less than 0.15 or ≤ 4.0[†] total REN for T/R port) Ability to recognize 600-ms disconnect signal or other means of automatic disconnect (such as voice reset disconnect timer, fixed recording time) 	Model 1300 answering machine Model 1531 Remote Answering System telephone

Power Supply Unit Load Requirements

Unit Load Calculation Rules

Mode	Installed Modules	Calculation
Hybrid/PBX, Modified Key, or Behind Switch	6*	Not required
Square Key or Behind Switch	4 or fewer [†]	Not required

The 391A1 and 391A2 power supply units generally support 6 modules of any type in Hybrid/PBX mode. However, if all 6 carrier slots meet the following conditions, the unit load total may exceed 54 and auxiliary power may be required:

- Only MLX or analog multiline station modules are installed.
- More than 45 MLX-20L or 34-button analog multiline telephones are installed.

The 391A3 power supply has a maximum rating of 75 unit loads. Use this power supply in place of a 391A1 or 391A2 on systems where unit loads will exceed 54.

- Auxiliary Power Units cannot be used with the 391A3 power supply.
- The 391A1 power supply unit generally supports 4 modules of any type in Square Key mode.

Power Supply Unit Load Requirements

(continued)

Unit Load Calculation Rules (continued)

	Installed	
Mode	Modules	Calculation
Square Key or Behind Switch	5 or more	 Use the "Unit Load Rating of System Modules" table and instructions below to determine the estimated unit loads (ULs): If the ULs < 75 and the 391A3 power supply is used, then no calculation is required. If a 391A1 or 391A2 power supply is used and the ULs > 54, then an auxiliary power supply is needed <u>or</u> replace the power supply with a 391A3. If ULs > 75, reconfigure the system so that the total ULs do not exceed 75 per carrier.

Power Supply Unit Load Requirements

(continued)

Unit Load Rating of System Modules

Module	Unit Load	Module	Unit Load
008	12.0	408 GS/LS	12.0
008 MLX	13.5	408 GS/LS-MLX	12.0
008 OPT	8.0	408 (LS)	12.0
012 T/R	7.2 [†]	800 GS/LS	0.0
016 T/R	12.8	800 GS/LS-ID	0.0
100D (DS1)	0.0	800 (LS) [*]	0.0
400 GS/LS/TTR	0.0	800 DID	8.0
400 (LS)*	0.0	800 NI-BRI	0.0
400EM	8.0	Processor	0.0

t 012 modules older than 517H13 may have a unit load up to 8.4.
 This is a MERLIN II loop-start-only module that can be used in the

MERLIN LEGEND Communications System.

Power Supply Unit Load Requirements (continued)

Network Access Trunks* Unit Load DID 1.0 DS1 0.0 GS/LS 0.0 Tie 1.4 Telephones MLX-5. Unit Load Rating of System Trunks, Telephones, and Adjuncts

Unit loads are computed per trunk.

- Up to two DSS consoles (one DSS per MLX-28D or MLX-20L) can be powered from each control unit carrier. For example, a 3-carrier system can have 6 system operator positions, each with one DSS powered from the control unit.
- The MFM is powered by an individual wall power unit located at the station.

NOTES

Error Code	Description	Action
0001	TIMEOUT COLD START: System programming OK.	No action required; however, if problem persists, troubleshoot the processor.
0002	POWER UP WARM START: System programming OK.	No action required; however, if problem persists, troubleshoot the processor.
0003	SOFTWARE COLD START: System programming OK.	If problem persists, troubleshoot the processor.
0004	SOFTWARE WARM START: System programming OK.	If problem persists, troubleshoot the processor.
0005	Reset - DIAGNOSTIC SWITCH	4:
0006	INCOMPLETE COLD START: System cold-started while restart in progress.	If problem persists, troubleshoot the processor.
0007	SANITY TIMEOUT RESET: Faulty software, module, carrier, or processor sanity timer.	Check module and/or processor.
0008	MAX RESET COUNT EXCEEDED: System cold-started because of too many warm starts.	If problem persists, troubleshoot the processor.
0009	FRIGID START: System restarted and initialized to defaults; also logged after System Erase.	If processor was removed while in use, system may perform frigid start because of loss of system programming. Restore system as described in System Programming and Maintenance (SPM).

Error Code	Description	Action
000A	POWER UP COLD START: RAM failure in processor; system programming OK.	If problem persists, check processor.
000B	CARD INSERTED/REMOVED:	None.
000C	SLOT STREAM CNT EXCEEDED: Slot generated excessive interrupts.	If problem persists, check module.
000D	FMWR NOT IN STANDBY MODE: Module firmware not in standby mode.	If problem persists, check module.
000E	COMMAND BUFFER FULL:	If problem persists, check processor and module.
000F	TASK RUNNING TOO LONG	None; if problem persists, check processor.
0010	INVALID SLOT INTERRUPT: Cannot determine module responsible for interrupt.	Check modules and replace if necessary; if problem persists, check processor.
0011	STACK OVERFLOW: Processor problem.	Check processor.
0012	INVALID RESET FLAG: Processor problem.	Check processor.
0013	DUART STREAMING INT: Processor problem.	Check processor.
0014	PROCESSOR ERR INTERRUPT: Processor problem.	Check processor.
0015	MODULE MISMATCH: Module inserted into wrong slot.	Change system programming for proper module or install proper module.

Error Code	Description	Action
0016	POWER UP COLD START: Module dual port RAM failure; system programming OK.	If problem persists, check module for slot indicated.
0017	REAL TIME CLOCK FAULT: Date and/or time incorrect or unreadable.	If problem persists, replace processor module.
0018	RTC COLD START: This error is not displayed.	
0019	RESET TIME & DATE: System cold-starts because real-time clock chip is not working correctly.	If problem persists, replace processor module.
0401	ABK CARD NOT INSERTED: PCMCIA memory card for translation is not inserted.	Insert a translation card or an unformatted card.
0402	ABK INCORRECT CARD TYPE: PCMCIA memory card for non-translation is inserted.	Remove current card and insert a translation card or an unformatted card.
0403	ABK CARD WRITE- PROTECTED: Translation card has write- protected switch on.	Turn write-protection switch to off. If problem persists, try another card. If still not working, replace processor module.
0404	ABK EXTENSION BUSY: A station is in program, administration, or maintenance mode.	Wait until station changes mode.

Error Code	Description	Action
0405	ABK FAULTY CARD: Unknown cause of a bad card.	Reset card and retry. If problem persists, try another card. If still not working, replace processor module.
0801 and	CTI LINK DELETED: A board renumber or slot	Check that the following are true:
1C07 and 5801	restore moved the CTI link to an unacceptable port and the system has removed the	1. The system is in Hybrid/PBX mode.
	link.	2. The link is on an 008 MLX or 408 MLX board.
		3. The MLX board firmware vintage is not 29.
		4. The extension is not an operator position.
		5. An MLX telephone is not connected to that port.
		6. Board renumber has not moved the MLX extension to the system programming port.
0C01	NO I-VMS PORT IN SERV: VMS machine may be down.	None
0C02	DID INTERDIGIT TIMEOUT: Noisy line or CO problem.	None; if problem persists, check DID line and inform CO if necessary.
1C01	POOL M-BUSY EXCEEDS 50%: More than half the trunks in pool are busy.	Check trunk.

Error Code	Description	Action
1C02	DPR TEST NOT COMPLETED:	Slot did not complete initializing.
1C03	FW UPGRADE ATTEMPT:	No action required.
1C04	FW UPGRADE COMPLETE	No action required.
1C05	INVALID FMW 29 DETECTED: Incompatibility problem; specified video endpoint or UDM is connected to an 008 or 408 MLX module with firmware of vintage 0x29.	Replace 008 or 408 MLX module with one of another firmware vintage. Retire permanent alarm manually.
1C06	BAD BOARDS IN SYSTEM: At least one incompatibility problem of type HER 0x1C05 detected. Turns on red LED on processor.	Replace 008 or 408 MLX module with one of another firmware vintage. Retire permanent alarm manually.
1C07	See error code 0801	
2C01	T1 ACCESS VIOLATION: T1 services (channels- voice/data) administered incorrectly.	Check facility provisioning and readminister channels for voice or data. Ensure that T1 data facilities are accessed from data terminals only (such as UDMs or desktop video systems) and that T1 voice facilities are accessed from telephones only (such as MLX telephones).

Error Code	Description	Action
3001	ALARM TABLE FULL: Error logs are full; turns on processor LED.	Correct indicated errors, and then remove entries from the transient system error log. If problem persists, cold-start the system. SysProgram→System→ Restart
4401	USER REQUESTED SYS ERASE: Logged after System Erase. If System Erase is successful, this error is removed immediately.	If error remains in transient log, repeat System Erase. If problem persists, check processor.
4402	USER REQST UPGRD/INSTALL:	None.
5801	See error code 0801	
6C01	DS1 LOSS OF SIGNAL ALARM: Service on link has been lost.	Usually no action. Check T1 facility. If problem persists, contact NSAC Tier III.
6C02	DS1 BLUE ALARM: All 1s being received; service on link has been lost.	Usually no action. Check T1 facility. If problem persists, contact NSAC Tier III.
6C03	DS1 RED ALARM: Invalid framing information on incoming signal; service on link has been lost.	Usually no action. Check T1 facility. If problem persists, contact NSAC Tier III.
6C04	DS1 YELLOW ALARM: Far end of network interface has lost frame synchroniza- tion; service on link has been lost.	Usually no action. Check T1 facility. If problem persists, contact NSAC Tier III.

Error Code	Description	Action
6C05	DS1 LOSS OF MULTIFRAME: Service on link has been lost.	Usually no action. Check T1 facility. If problem persists, contact NSAC Tier III.
6C06	DS1 REMOTE MULTIFRAME: Far end of network interface is experiencing loss of multiframe; service on link has been lost.	Usually no action. Check T1 facility. If problem persists, contact NSAC Tier III.
6C07	DS1 MAJOR ALARM: Average bit error rate exceeds 10E-3; service on link has been lost.	Usually no action. Check T1 facility. If problem persists, contact NSAC Tier III. Maintenance→Slot→ Error Events→ Current hr
6C08	DS1 MINOR ALARM: Average bit error rate exceeds 10E-6.	Usually no action. Check T1 facility. If problem persists, contact NSAC Tier III. Maintenance→Slot→ Error Events→ Current hr
6C09	DS1 MISFRAME ALARM: Misframe count reached 18.	Usually no action. Check T1 facility. If problem persists, contact NSAC Tier III. Maintenance→Slot→ Error Events→ Current hr
6C0A	DS1 SLIP ALARM: Slip count reached 88.	Usually no action. Check T1 facility. If problem persists, contact NSAC Tier III. Maintenance→Slot→ Error Events→ Current hr

Error Code	Description	Action
6C0B	HARDWARE INOPERATIVE: Hardware not operating properly. If this is the only 100D module or 800 NI-BRI module, or if this is the designated clock module, its TDM bus clock generator was not activated.	A Busy-Out/Restore or Reset/Restore may clear problem. If problem persists, contact NSAC Tier III.
6C0C	BRI LOSS OF SYNC: Service on link has been lost.	Usually none; check BRI facility. If problem persists, contact NSAC Tier III.
6C0D	BRI NET DEACTIVATED:	Usually none; check BRI facility. If problem persists, contact NSAC Tier III.
6C0E	BRI NET INV 2B+D LB ACT:	Usually none; link should return to normal once test is completed. If problem persists, contact NSAC Tier III.
6C0F	BRI NET INV B1 LB ACT:	Usually none; link should return to normal once test is completed. If problem persists, contact NSAC Tier III.
6C10	BRI NET INV B2 LB ACT:	Usually none; link should return to normal once test is completed. If problem persists, contact NSAC Tier III.
6C11	BRI NET INV IL LB ACT:	Usually none; link should return to normal once test is completed. If problem persists, contact NSAC Tier III.

Error Code	Description	Action
6C12	BRI NET INV QM LB ACT:	Usually none; link should return to normal once test is completed. If problem persists, contact NSAC Tier III.
6C13	BRI SLIPS > 88:	Usually none; link should return to normal once test is completed. If problem persists, contact NSAC Tier III.
6C14	BRI NET REQUESTED CCRCs:	Usually none; link should return to normal once test is completed. If problem persists, contact NSAC Tier III.
7001	PRI SVC AUDIT TIMEOUT:	Check PRI facility and report to service provider; otherwise, no action is needed. If problem persists, contact NSAC Tier III.
7002	PRI SVC STATE INCONSIST:	Check PRI facility and report to service provider; otherwise, no action is needed. If problem persists, contact NSAC Tier III.
7003	PRI D-CHNL INOPERATIVE:	Check PRI facility and report to service provider; otherwise, no action is needed. If problem persists, contact NSAC Tier III.

Error Code	Description	Action
7004	PRI B-CHNL NOT RELEASED:	Check PRI facility and report to service provider; otherwise, no action is needed. If problem persists, contact NSAC Tier III.
7005	PRI B-CH GROUP INCONSIST:	Check PRI facility and report to service provider; otherwise, no action is needed. If problem persists, contact NSAC Tier III.
7006	PRI PROTOCOL MISMATCH: A mismatch in the protocol being supplied versus the protocol expected by MERLIN LEGEND.	 Inform the service provider to change the administration for this circuit. After the service provider restarts the circuit, verify that all alarms for this slot are cleared.
7401	TRK UPLINK MESSAGE ERROR: Communication problems between processor and modules; unrecognized message from module to processor.	Test trunk with single-line telephone. If problem is not in trunk, replace module with one known to work. If problem is not seen with known working module, replace the module and restart.

Error Code	Description	Action
7402	LOOP CONTROL BIT NOT SET: No loop current on outgoing call. If error occurs four times consecutively, and if automatic maintenance- busy is enabled with less than 50% maintenance busy, trunk is busied-out automatically.	Test trunk with single-line telephone. If problem is not in trunk, replace module with one known to work. If problem is not seen with known working module, replace the module and restart.
7403	NO LOOP CURRENT: Communication problems between module and CO. No loop current. If error occurs four times consecutively, and if automatic maintenance- busy is enabled with less than 50% maintenance busy, trunk is busied-out automatically.	Test trunk with single-line telephone. If problem is not in trunk, replace module with one known to work. If problem is not seen with known working module, replace the module and restart.
7404	STUCK RINGING: Communication problems between module and CO. If error occurs two times consecutively, trunk is busied-out automatically whether or not automatic maintenance-busy is enabled.	Test trunk with single-line telephone. If problem is not in trunk, replace module with one known to work. If problem is not seen with known working module, replace the module and restart.
7801	NOT IN NORMAL OP MODE: Module not in normal operation mode; reported in background module check.	Reset board. If problem persists, check module. Maintenance→Slot→ Slot Number→Reset
7802	SANITY INT NOT GENERATED: Applies only to modules with extension jacks.	Reset board. If problem persists, check module.

Error Code	Description	Action
7803	NO PORT BOARDS AVAILABLE: Modules not present.	None; delete entry from transient log.
7804	INVALID SANITY RESPONSE: Sanity test received invalid responses; applies only to modules with extension jacks.	Reset board. If problem persists, check module.
7805	INVALID SLOT NUMBER: Rare; software could not process an event detection because slot number was invalid.	None; if problem persists, restart system.
7806	NOT IN STANDBY MODE: Reported during cold start or background check.	Reset board. If problem persists, check module.
7807	SELF TEST NOT COMPLETED: Reported during cold start.	Reset board. If problem persists, check module.
7808	TEST RESULT REGISTER BAD: A module or processor error during test run.	Reset board. If problem persists, check module.
7809	TEST STATUS REGISTER BAD: A module or processor error during test run.	Reset board. If problem persists, check module.
780A	DPR TEST NOT COMPLETED: Reported during cold start.	If problem persists, check module.
780C	RAM TEST FAILURE: Memory failed RAM test; turns on processor LED.	If problem persists, replace processor.

Error Code	Description	Action
Error Code	Description	Action
780D	UPPER ROM FAILURE: Memory failed ROM test; turns on processor LED.	If problem persists, replace processor.
780E	LOWER ROM FAILURE: Memory failed ROM test; turns on processor LED.	If problem persists, replace processor.
8401	MISCELLANEOUS ERROR: Not reported.	None.
8402	WINK TOO SHORT: Outbound dialing problems on tie trunks. Wink from the far end of network interface is less than 100 ms, the minimum for delay-dial or wink-start tie trunks. Tie trunk waits for valid signal.	Check far end of network. Check for faulty cable. Replace module.
8403	NO EXTERNAL RELEASE: Communication problems between module and CO. Far end has not disconnected within 4 minutes. If error occurs twice consecutively, trunk is busied-out automatically whether or not automatic maintenance-busy is enabled.	Check far end of network interface. Check for faulty cable.
8404	ON HOOK BEFORE WINK: Outbound dialing problems on tie trunks. Far end of network interface went on- hook before handshake was completed (for delay-dial or wink-start tie trunk).	If problem persists, check tie trunk configuration. Check far end. Check for faulty cable. Replace module.

Error Code	Description	Action
8405	ON HOOK BEFORE READY: Outbound dialing problems on tie trunks. Far end of network interface went on- hook before guard time elapsed (for delay-dial or wink-start tie trunk).	Check far end of network interface. Check wink start and for faulty cable. Check far end of network. Replace module.
8406	INTERDIGIT TOO SHORT: Inbound dialing problems on tie and DID trunks.	Check far end of network interface. Check for faulty cable. Replace module.
8407	BAD UPDATE: Communication problems between processor and modules; module may need to be replaced.	Turn processor off and then on. Repeat system programming procedure. If problem persists, contact NSAC Tier III.
8408	ROTARY RATE > 12PPS: Inbound dialing problems on tie and DID trunks.	Check far end of network interface. Check for faulty cable. Replace module.
8409	ROTARY RATE < 8PPS: Inbound dialing problems on tie and DID trunks.	Check far end of network interface. Check for faulty cable. Replace module.
840A	BAD DOWNLINK MESSAGE: Communication problems between processor and modules; module received an unrecognized message from processor.	Turn processor off and then on. Repeat system programming procedure. If problem persists, replace module.
840B	NO LOOP CURRENT: Communication problems between module and CO; no loop current. If error occurs four times consecutively and if automatic maintenance- busy is enabled and maintenance-busy limit is less than 50%, trunk is busied-out automatically.	Replace module with similar module and test. If problem is resolved, replace bad module. If problem persists, reinstall old module and test trunk.

Error Code	Description	Action
840C	STUCK RINGING: Communication problems between module and CO; no loop current. If error occurs four times consecutively and if automatic maintenance- busy is enabled and maintenance-busy limit is less than 50%, trunk is busied-out automatically.	Replace module with similar module and test. If problem is resolved, replace bad module. If problem persists, reinstall old module and test trunk.
840D	INCORRECT FIRMWARE STATE: If error occurs four times consecutively and if automatic maintenance- busy is enabled and maintenance-busy limit is less than 50%, trunk is busied-out automatically.	Turn power off for at least one second, and then turn it on. Repeat system programming procedure. If problem persists, replace module.
840E	UPLINK MESSAGE ERROR: Communication problems between processor and modules. Module received unrecognized message from processor.	Turn processor off and then on. Repeat system programming procedure. If problem persists, replace module.
840F	LOST IDLE MESSAGE ERROR:	
8C01	SLOTS NOT EQUAL: Module that occupies indicated slot does not match slot information contained in PC or PCMCIA card backup file.	Check slot descriptions in backup file against actual system modules that occupy slots. After mismatch is corrected, restore.
9801	MCARD WRITE ERROR: Write to memory card is unsuccessful or too slow.	Reset card and try again. If problem persists, replace card and try again. If problem continues, replace processor module.

Maintenance Error Codes (continued)				
Description	Action			
MCARD ERASE ERROR: Erasure of memory card is unsuccessful or too slow.	Reset card and try again. If problem persists, replace card and try again. If problem continues, replace processor module.			
MCARD 12-VOLT ERROR: The memory card voltage is incorrect.	Reset card and try again. If problem persists, replace card and try again. If problem continues, replace processor module.			
NW REJECTS SPID: Service on link has been lost.	Check administered line. Modify if required, or call CO to correct.			
LINK ESTABLISHMENT FAIL: Service on link has been lost.	Check that line is securely connected to port and that LEDs on module show proper operation. If card appears to work properly, line may not have been activated by CO.			
NW NOT RESPOND TO SETUP: Service on link has been lost.	Network not responding to LEGEND messages. Contact CO.			
NW NOT RESPOND TO RELEASE: Service on link has been lost.	Network not responding to LEGEND messages. Contact CO.			
ENDPOINT UNINIT (L2/L3): Service on link is uninitialized.	If this lasts more than three minutes, replug the DSL. If the error remains, contact CO.			
	Description MCARD ERASE ERROR: Erasure of memory card is unsuccessful or too slow. MCARD 12-VOLT ERROR: The memory card voltage is incorrect. NW REJECTS SPID: Service on link has been lost. LINK ESTABLISHMENT FAIL: Service on link has been lost. NW NOT RESPOND TO SETUP: Service on link has been lost. NW NOT RESPOND TO RELEASE: Service on link has been lost. NW NOT RESPOND TO RELEASE: Service on link has been lost.			

Technician's Addendum Maintenance Error Codes (continued)

-		
Error Code	Description	Action
9C08	PROTOCOL ERROR: Service on link may be affected.	Verify line provisioning. If correct, contact NSAC Tier III.
A401	CTI LINK BROADCAST RESET: Occurs during a broadcast reset.	If several of these occur: 1. Check that the system is in Hybrid/PBX mode. 2. Validate the wiring and
		the connections. 3. Press the Restart Button (see the procedure "Restart" in Chapter 4 of <i>Maintenance and</i> <i>Troubleshooting</i>).
		4. Call the TSO's Telephony Services Maintenance Group (800 242-2121) for the procedures to unload and reload the PBX driver.

Error Code	Description	Action
A801	CTI LINK HIDDEN RESET: Occurs during a hidden reset.	If several of these occur, and the client application has "slow" response time:
		1. Validate the wiring and the connections.
		2. Press the Restart Button (see the procedure "Restart" in Chapter 4 of <i>Maintenance and</i> <i>Troubleshooting</i>).
		3. Call the TSO's Telephony Services Maintenance Group (800 242-2121) for the procedures to unload and reload the PBX driver.

Wiring Constraints

System Wiring

- System within 5 ft. of dedicated AC power outlet.
- System within 25 ft. of the network interface. Otherwise, use an Off-Premises Range Extender (OPRE).
- System within 1000 cable ft. (304.8 m) of telephones.
- Ground wire for the power supply cannot be over 10 ft.
- If the SMDR printer is over 50 ft. from the control unit, use an Asynchronous Data unit (ADU).
- Back-to-back connection of the DS1 facility with another system's facility is possible when the cable distance is less than 1300 ft.

Telephone Wiring

- Maximum cord length from an MLX telephone to a 7500B data module is 80 ft. (24 m).
- The total length of cords between the KS22911-L2 or 406743419 power supply and the MLX telephone cannot be more than 50 ft.
- Do not replace the 2-ft. D8AC cord (packaged with the DSS) with a longer cord.
- The radio base of the MDW 9000 cordless telephone must be at least 3 ft. from the control unit.

Installing SPM

Follow these steps to install System Programming and Maintenance (SPM) onto the hard drive of a computer:

- 1. Insert the SPM diskette into the computer.
- 2. At the C: prompt, type *MKDIR SPM* and press ENTER.
- 3. Type cdlspm and press ENTER.
- Type a:install and press ENTER to install the program from the diskette.
- After the installation is complete, type *spm* and press ENTER to display the SPM Welcome screen.

Accessing SPM

Direct Local Connection

Follow these steps to access SPM when you are directly connected to the system via the administration jack on the processor module:

- 1. Set up the physical connection between your laptop or PC and the control unit.
- 2. Type *spm* and press ENTER to display the SPM Welcome screen.
- 3. Press any key to display the SPM Main Menu.

Local Modem Connection

Follow these steps to access SPM when you are connected on-site via a modem:

- 1. Set up the physical connections between the PC and a 012 module on the control unit.
- 2. Type *spm* and press ENTER to display the SPM Welcome screen.
- 3. Press **ENTER** to display a blank screen on which you can enter modem commands. (You may have to press **ENTER** several times.)
- 4. Dial ATDT *10.
- 5. Type the SPM password to display the SPM Main Menu.

Remote Modem Connection

Follow these steps to access SPM when you connected off-site via a modem:

- 1. Type *spm* and press **ENTER** to display the SPM Welcome screen.
- 2. Press **ENTER** to display a blank screen on which you can enter modem commands. (You may have to press **ENTER** several times.)
- 3. If your system has activated the Remote Access feature, type the following:
 - a. *ATDT*
 - b. Remote access telephone number
 - c. Barrier code (if existing) preceded by a "W."
 - d. W*10

Remote Modem Connection (continued)

- 4. If your system does not have the Remote Access feature activated, do the following:
 - a. Place a voice call to the system on the line to which the modem is connected by using the main telephone number.
 - b. Have the operator transfer you to the modem (by pressing Transfer, dialing *10, and hanging up the telephone).
 - c. To put the modem on line, type ATH1 or ATH10, depending on the type of modem. (In ATH10, the last "digit" is the alphabet letter "O," not zero.)
 - d. Press ENTER, and hang up the telephone.
- 5. Type the SPM password to display the SPM Main Menu.

When Calling NSAC

Do the following before you call Tier III for troubleshooting:

- Check and recreate the problem.
- Connect your laptop or PC so you are ready.
- Know the software version of your system (Dial *05 on an Intercom button).
- Write down the errors in the Error Logs.
- Know the configuration of the system operator console (DLC or QCC).
- Know the type of tie lines (emulated or not, wink-start, etc.).

QPPCNs on the NSAC Bulletin Board

Follow these steps to review QPPCNs on the NSAC bulletin board:

- 1. Dial 800-241-3375.
- 2. At the first screen, select "F" for File Section.
- 3. At the next screen, select "N" for Non-Tier III Tips.
- 4. At the next screen, select "8" for QPPCNs.
