  description of iii

D

DHCP
  configuring 13-2
DP-9 connector (see connectors)
DVMRP
  commands 6-2
  configuring 6-3
  overview 6-3

E

EMM (Enterprise Management Module)
  installing EMM or interface module A-3
  primary 14-14
    description 1-33
    updating software on 14-8
  removing A-2
  secondary (redundant)
    description 1-32
    overview 1-7
  setting the jumper position on the 14-6
encapsulation types 1-3
Ethernet
  Gigabit Ethernet (1000BASE-X) 1-19, 1-22, 1-24, 4-4, 6-3, B-1

F

fans
  reliability features 1-6
  safety features 1-14
FDDI
  2-port module 1-29
  max link length C-5
flash device
  boot 14-1
  external PCMCIA card 14-1
  onboard 14-1
  rebooting from a 14-3
  reformatting a 14-20
  TFTP server 14-1
  viewing the contents of a 14-20
flash memory files
  copying 14-16
  deleting 14-17
  installing (bootstrap software only) 14-19
  renaming 14-18
  saving 14-17
  transferring 14-8
  working with 14-16

G

generic protocol-based VLANs
  protocol-based vlans 3-9
Gigabit Ethernet
  1000BASE-LH 1-23
  1000BASE-LX 1-22
  1000BASE-SX 1-18

H

hot-swappable components 1-6
HSRP
  configuration example 11-3
  description of 1-5, 11-1
  global commands 11-1
  VLAN HSRP group commands 11-2

I

IGMP
  configuring 6-4
  overview 6-4
installation
  AC power supply A-6
  DC power supply A-9
