VME Pro Lite ADDENDUM

The VME Pro Lite is based on the VME Pro. This is an addendum to the Installation and Programming manual for the Unified Messaging Voice Mail System (VME Pro).

Compared to the VME Pro, the VME Pro Lite has the following fixed configuration:

- 48 Mailboxes instead of 500
- 2 Ports only instead of the 4 or 8 Ports
- 18 Hours of Memory Capacity instead of the 36 or 72 Hours
- Built-in Unified Messaging

The VME Pro Lite has a dedicated version of the VUP – Voice Mail Utility Program.

When installing and programming the VME Pro Lite, the above limitations should be kept in mind. There are no differences in the functions and programming codes.
