## The Phone/PC Connection for Enhancing Customer Service

The Panasonic PC Phone software application provides enhanced features and functionality via your PC, enabling you and/or your assistant to communicate more efficiently and effectively with your customers and business contacts. This makes it easy to give your customers a higher level of service that reflects well on your company. PC Phone also provides easy access to Private Branch Exchange (PBX) features, a call log capability and a host of other productivity-enhancing functions.

### You know who is calling before you answer

When a call comes in, PC Phone displays the caller's ID\* and other information on your PC screen even before you take the call. You can even play a custom pre-programmed wave file, display a picture or assess a URL address for each call.

### Outlook integration for Easy Dialing

Use a Microsoft Outlook Address Book for fast, easy dialing. Import and export phone book data to exchange data with software programs such as Microsoft Excel.

### PBX System Speed-Dial Access

Quickly access speed-dial numbers and the corresponding caller names stored in your PBX. Data is updated automatically from your PBX each time you launch PC Phone.

### Call Log Record and History

The Call Log function displays a list of incoming and outgoing calls along with information such as caller names and phone numbers, call condition and duration.

### 2-Way Recording

Never miss important details again. With PC Phone you can easily record a conversation automatically or manually onto your PC's hard disk.

### 2-Way Video Conferencing

Register a URL or IP address to link it to a caller ID or extension number. When a call from that number comes in, your browser will automatically pop up and the Network Camera image will appear on your PC. If cameras are set up to capture your face and the caller's face, you can use the system for a video teleconference. Or combine this feature with an interphone and monitor people who ring your doorbell. This feature has additional applications in warehouses or conference rooms.

### Voicemail Versatility

Replay the voice messages recorded by the Telephone Answering Machine (TAM) function, or have recorded messages automatically transferred by phone or e-mail to a designated party. You can also receive messages at your PC or cellular phone and create your own greeting message.

### Voice Memo Creator

Voice memo makes it easy to create a recorded voice memo at any time during a conversation and send it to someone via e-mail. You can also create a text memo and send it via e-mail or use it as a personal reminder.

### Easy Connection via USB

No special wiring is required to install PC Console. A simple USB interface connects the phone to the PC.

### SYSTEM REQUIREMENTS

Computer Type: PC, Operating System: Windows® 98SE, 2000 or XP, CPU: Pentium® II 300MHz or higher, RAM: 64 MB, HDD: 100MB used (when installing), Display: XGA (1024 x 768) or greater, USB Interface: USB Driver with Voice Support, Sound Card.

Windows is a trademark of Microsoft Corporation in the United States and other countries.

Pentium is a registered trademark of Intel Corporation.

\* Requires subscription to name-and-number Caller ID offered by certain telephone companies for a fee.
