Manufacturing quality lawn care equipment since 1945

Made In The

USA

SAFETY AND OPERATIONAL DECALS

Replace decal immediately if damaged. Order by part number from Swisher Mower and Machine Co. Inc.

OD30 – WARNING DECAL

OD36 – DEFLECTOR DECAL

OD43 – FLYING DEBRIS DECAL

OD55 – DANGER DECAL

OD29 – SPINNING BLADE DECAL

SERVICE AND ADJUSTMENTS

Stop engine, let all moving parts come to a complete stop. Disconnect spark plug.

BELTS CONFIGURATION

BLADE SPINDLE BELT REPLACEMENT

REMOVAL

- *Stop engine, let all moving parts come to a complete stop. Disconnect spark plug.*
- Remove belt cover.
- Remove Blade Drive Belt. (See Blade Drive Belt replacement.)
- Pull tension idler away from Blade Spindle Belt to relieve tension.
- Remove belt.

INSTALLATION

- Pull tension idler away from belt.
- Install belt according to above configuration.
- Install Blade Drive Belt as shown.
- Install belt cover and tighten hardware.

BLADE DRIVE BELT REPLACEMENT

REMOVAL

- *Stop engine, let all moving parts come to a complete stop. Disconnect spark plug.*
- Disengage all blade controls by releasing the bails.
- Remove belt cover.
- Rotate belt off pulleys and pull belt through motor belt guide.

INSTALLATION

- Route belt as shown.
- Adjust engage idler tension. Belt should be snug during engagement of blade latch. Too much tension will not allow the blade latch to function properly.
- Tighten nuts on blade engage cable when finished.
- Install belt cover and tighten hardware.

WHEEL DRIVE BELT REPLACEMENT

REMOVAL

- **Stop engine, let all moving parts come to a complete stop. Disconnect spark plug.**
- Remove belt cover.
- Remove Blade Drive Belt, (See “Blade Drive Belt replacement”)
- Locate belt guide for wheel drive belt and loosen.
- Remove wheel drive belt.

INSTALLATION

- Install belt as shown.
- Adjust belt guide snug against motor pulley and back off ? ”.
- Tighten belt guide hardware.
- Install Blade Drive Belt (see “Blade Drive Belt installation”).
- Install belt cover and tighten hardware.

Check for loosened bolts, nuts, springs, etc. often. Replace filters, spark plugs as needed. Keep blades in good working order.

WHEEL BRAKE ADJUSTMENT

Adjustment may be necessary if the unit does not stay in position on a hill with the operator bails released, or if the brake drags while in neutral with the “GROUND CONTROL” bail engaged.

PROCEDURE

- **Stop engine, let all moving parts come to a complete stop. Disconnect spark plug.**
- Release “GROUND CONTROL” bail.
- Adjust nuts forward or backward. When the “GROUND CONTROL” bail is disengaged there should be constant tension on the brake arm.
- All tension should be off brake arm when “GROUND CONTROL” bail is engaged.
- Tighten adjustment nut when finished and re-attach spring, if necessary.

WHEEL DRIVE BELT ADJUSTMENT

Adjustment may be necessary if loss of traction occurs due to belt slippage.

PROCEDURE

- Adjust “GROUND CONTROL” cable in or out to achieve maximum traction. Too much tension will not allow the “GROUND CONTROL” bail to fully activate.
- Too little tension will allow the belt to slip, resulting in loss of traction.
- “GROUND CONTROL” bail should fully close against handlebars when functioning properly.

OVERALL ASSEMBLY

When ordering painted parts, please indicate with corresponding letters: C = Red Parts

TK = Textured Black Parts

REPLACEMENT PARTS

When ordering painted parts, please indicate with corresponding letters: C = Red Parts;
TK = Textured Black Parts (ex. 4207TK, 4237C)
